ILRI
International Livestock Research Institute
PO box 30709-0010
Nairobi-Kenya:

The difference between Compressed Atmospheric Air and Synthetic air (also known as **Zero** air) is that

- Synthetic (**Zero Air**) contains lesser impurity contents of water vapor and Hydrocarbons than **Compressed Atmospheric air**.
- Synthetic air is used in applications where impurities like Moisture or Hydrocarbons are not desired.

Compressed available at 150 Bar pressure (Only pure nitrogen at 200 Bar)
